The Highland Boundary Fault

What is the Highland Boundary Fault?

Where is it in Scotland?

When was it formed?

What Rock Type do you find here?

What other things happen at a fault line?

Key Facts:

- **Underneath planet earth's crust are tectonic plates, which collided to form mountain ranges!**
- **This one runs diagonally across Scotland. From the Isle of Arran in the West to Stonehaven in the East.**
- **All this happened approximately 400 million years ago**
- **Sedimentary rocks can be found here....If you're lucky maybe a fossil.**
- **You can even get, albeit very small... earthquakes!**
